

What makes a beautiful face?

For centuries artists have sought to paint beautiful faces, with each portrait characterized by innate facial proportion. This facial balance is defined by cosmetic physicians as the “triangle of beauty”. In order to harmonize facial proportions, physicians seek to form an upside-down anatomical triangle encompassing the cheeks, nose and chin.

Want to pump up the volume?

Talk to your doctor today

Ask your doctor about how quick and easy it is to add some volume to your cheeks with the HA Volumiser.

Go on, pump up the volume!

Enhancing your beauty

Now it's possible for you to have the classical features that artists seek to capture. Enhancing your cheeks will help to define and balance your own innate beauty.

Whilst smoothing out wrinkles around your eyes freshens up your look, nothing can beat enhancing your cheeks for a truly stunning difference to your beauty. That's because fuller cheeks lift your whole face to create the look you want in an instant.

There's now a treatment available that will give you the volume you want.

Introducing the volumising HA filler

The volumising HA filler is specially designed for results that truly make a difference to your natural beauty.

Scientifically proven

With the volumising HA filler you have the confidence and satisfaction of scientifically proven results to give you smooth and natural looking cheeks.

Natural product

The volumising HA filler is made of hyaluronic acid, which is a naturally occurring complex sugar. It is found naturally in the body and contributes to the volume of the skin. As you age, levels of this compound in your skin slowly decrease.

Designed to fit your lifestyle

Convenient

You can rejuvenate your facial beauty in the time it takes to have your lunch. The procedure is quick and convenient with immediate results, leaving you free to get back to your normal activities.

Longer lasting

The volumising HA filler's unique formulation allows doctors to consistently create fuller cheeks and defined cheekbones.
